ABOUT COSEWIC

COSEWIC MANDATE

Designations are made on native species for the following taxonomic groups: mammals, birds, reptiles, amphibians, fishes, arthropods, molluscs, vascular plants, mosses, and lichens. The Committee on the Status of Endangered Wildlife in Canada (COSEWIC) assesses the national status of wild species, subspecies, varieties, or other designatable units that are considered to be at risk in Canada.

COSEWIC MEMBERSHIP

COSEWIC comprises members from each provincial and territorial government wildlife agency, four federal agencies (Canadian Wildlife Service, Parks Canada Agency, Department of Fisheries and Oceans, and the Federal Biosystematics Partnership, chaired by the Canadian Museum of Nature), three nonjurisdictional members and the co-chairs of the species specialist and the Aboriginal Traditional Knowledge subcommittees. The Committee meets to consider status reports on candidate species.

DEFINITIONS

The following definitions were reviewed by COSEWIC in May 2003:

Species	Any indigenous species, subspecies, variety, or geographically or genetically distinct population of wild fauna and flora.
Extinct (X)	A species that no longer exists.
Extirpated (XT)	A species no longer existing in the wild in Canada, but occurring elsewhere.
Endangered (E)	A species facing imminent extirpation or extinction.
Threatened (T)	A species likely to become endangered if limiting factors are not reversed.
Special Concern (SC)*	A species of special concern because of characteristics that make it particularly sensitive to human activities or natural events.
Not at Risk (NAR)**	A species that has been evaluated and found to be not at risk.
Data Deficient (DD)***	A species for which there is insufficient scientific information to support status designation.

---

* Formerly described as "Vulnerable" from 1990 to 1999, or "Rare" prior to 1990.

** Formerly described as "Not In Any Category", or "No Designation Required."

*** Formerly described as "Indeterminate" from 1994 to 1999 or "ISIBD" (insufficient scientific information on which to base a designation) prior to 1994.

COSEWIC ASSESSMENT RESULTS

The tables that follow (Tables 6-8) are organized by status category and then by taxonomic group. An explanation of the symbols and abbreviations is provided below. For each species, the information provided includes the common name, scientific name, population name, and range of occurrence in Canada (by province, territory or ocean). The most recent date of assessment by COSEWIC is shown, and symbols provide information on the outcome of status re-assessments (e.g., uplisting, downlisting) and the basis of re-assessment for species evaluated against the new quantitative criteria. For birds, range of occurrence includes the Canadian breeding and wintering distribution.

The first COSEWIC "Endangered Species List" was issued in 1978. In 1990, it was decided that all species considered by COSEWIC should be included in this document even if the species were Not at Risk or Data Deficient. Therefore, this document is divided into three separate sections. The first section (Table 6) includes species assessed and designated as Extinct, Extirpated, Endangered, Threatened or Special Concern. The second section (Table 7) includes species assessed and found to be in the Not at Risk category. The third section (Table 8) includes species assessed and found to be in the Data Deficient category because of insufficient scientific information. All three sections include the geographical occurrence and most recent date of assessment.

EXPLANATION OF SYMBOLS

Re-assessments and new assessments

↑ Species placed in a higher risk category (uplisted) after re-assessment on the date shown.
↓ Species placed in a lower risk category (downlisted) after re-assessment on the date shown.
↔ Species stays in the same risk category (no change) after re-assessment on the date shown.
\ Species moved to the Not at Risk category from a risk category (de-listed) on the date shown.
○ Species moved to the Data Deficient category from a risk category, or to a risk category from the Data Deficient category (changed), on the date shown.
(*no arrow*) New species assessed on the date shown.

Evaluation with COSEWIC's new quantitative criteria

COSEWIC has recently begun using quantitative criteria to assess species' risk of extinction. These criteria were adapted from the criteria used by the World Conservation Union (IUCN) and have been used by COSEWIC since October 1999.

△ or △⁺ Assessment based on a new status report or an update status report. A plus sign (+) indicates the report has an addendum or that the report has been modified.

⏃ or ⏃⁺ Species re-assessed using an existing status report. A plus sign (+) indicates the report has an addendum or that the report has been modified.

RECORD OF STATUS RE-ASSESSMENTS

A short history is provided for each species that has been re-assessed by COSEWIC, including date(s) of assessment and the status assigned. In October 1999 COSEWIC began using quantitative criteria to augment the earlier method of using status definitions to assign status. For species assessed since October 1999, the type of status report used as the basis for re-assessment is indicated. Update reports focus on changes in the biological and threat information that has become available since the last time a report was prepared. For some species, COSEWIC deemed the existing report suitable for re-assessment.

Acadian Flycatcher
Designated Endangered in April 1994. Status re-examined and confirmed in November 2000. Last assessment based on an update status report.

Allegheny Mountain Dusky Salamander
Designated Special Concern in April 1998. Status re-examined and uplisted to Threatened in November 2001. Last assessment based on an existing status report with an addendum.

American Badger
Designated Not at Risk in April 1979. Original Canada-wide listing de-activated in May 2000 when the American Badger was split according to subspecies.

American Black Bear
Designated Not at Risk in April 1998. Status re-examined and confirmed in April 1999.

American Ginseng
Designated Threatened in April 1988. Status re-examined and uplisted to Endangered in April 1999. Status re-examined and confirmed Endangered in May 2000. Last assessment based on an existing status report.

American Water-willow
Designated Threatened in April 1984. Status re-examined and confirmed in May 2000. Last assessment based on an update status report.

American White Pelican
Designated Threatened in April 1978. Status re-examined and de-listed (Not at Risk) in April 1987.

Anticosti Aster
Designated Threatened in April 1990. Status re-examined and confirmed in May 2000. Last assessment based on an update status report.

Athabasca Thrift
Designated Threatened in April 1981. Status re-examined and downlisted to Special Concern in April 1999. Status re-examined and confirmed in May 2002. Last assessment based on an existing status report.

Atlantic Cod
Designated Special Concern in April 1998. Split into four populations in May 2003. Original listing was de-activated. Last assessment based on an update status report.

Atlantic Walrus (Northwest Atlantic population)
Extirpated around 1850. Designated Extirpated in April 1987. Status confirmed in May 2000. Last assessment based on an existing status report.

Atlantic Whitefish
Designated Endangered in April 1984. Status re-examined and confirmed in November 2000. Last assessment based on an update status report.

Aurora Trout
Designated Endangered in April 1987. Status re-examined and confirmed in May 2000. Last assessment based on an update status report.

Baird's Sparrow
Designated Threatened in April 1989. Status re-examined and de-listed (Not at Risk) in April 1996.

Banded Killifish (Newfoundland population)
Designated Special Concern in April 1989. Status re-examined and confirmed in May 2003. Last assessment based on an update status report.

Banff Longnose Dace
Extinct since 1986. Designated Extinct in April 1987. Status confirmed in May 2000. Last assessment based on an existing status report.

Banff Springs Snail
Designated Threatened in April 1997. Status re-examined and uplisted to Endangered in May 2000. Last assessment based on an existing status report.

Barn Owl
The species was considered a single unit and assigned a status of Special Concern in April 1984. In April 1999, COSEWIC assessed the Western and Eastern populations of this species separately. The original listing for the Canadian range of the Barn Owl was de-activated.

Barn Owl (Eastern population)
The species was considered a single unit and assigned a status of Special Concern in April 1984. In April 1999, COSEWIC assessed the Western and Eastern populations of this species separately. The Eastern population was designated Endangered. Status re-examined and confirmed in May 2000. Last assessment based on an existing status report.

Barn Owl (Western population)
The species was considered a single unit and assigned a status of Special Concern in April 1984. In April 1999, the Western and Eastern populations were assessed separately. The Western population was designated Special Concern. Status re-examined and confirmed in November 2001. Last assessment based on an existing status report.

Bashful Bulrush

COSEWIC
Committee on the Status of Endangered Wildlife in Canada

COSEPAC
Comité sur la situation des espèces en péril au Canada

The Committee on the Status of Endangered Wildlife in Canada (COSEWIC) was created in 1977 as a result of a recommendation at the Federal-Provincial Wildlife Conference held in 1976.

It arose from the need for a single, official, scientifically sound, national classification of wildlife species at risk.

In 1978, COSEWIC designated its first species and produced its first list of Canadian species at risk.

In 2002, COSEWIC celebrated 25 years of science-based assessment of the status of species at risk in Canada.

On June 5 2003, the *Species at Risk Act* (SARA) was proclaimed. SARA establishes COSEWIC as an advisory body, ensuring that species will continue to be assessed under a rigorous and independent scientific process.
